

圆形逆流式冷却塔

CIRCULAR COUNTER FLOW COOLING TOWER

特点 Features:

- 采用瓶颈设计,迎风量小,冷却塔组件精心设计制造结构轻盈、坚固耐用,效果好。
- 本体和水盘采用玻璃钢纤维强化 FRP 材质,表面镜面防紫外线;
- 采用低噪音马达直接传动,多叶轴流式风车设计,风车排风效果强。
- 采用高性能自动旋转散水装置,压力低,损失少,散水均匀,热交接率大。
- 采用高级硬质 PVC 散热材,可耐温度达 55℃不变形,经过特殊加工成波浪与花纹状的散热材散热面积大,效果更好,不易积垢阻塞,可克服循环水质不佳之问题。

1, The use of bottleneck design, small amount of wind, cooling tower assembly design and manufacture of light structure, strong and durable, high effect.

2, The body and the water plate using glass fiber reinforced FRP material, the surface of the mirror can prevent the perimeter;

3, Use the direct drive motor with low noise, multi axial windmill design. Windmills exhaust effect is good.

4, Use the high performance automatic rotary spray device. Low pressure ,small loss, aroll uniform and high heat exchange efficiency.

5, Using the advanced hard PVC heat resistant material, the temperature of 55 °C without deformation, after special processing into the heat radiating area and material wave pattern form, the effect is better, not easy to fouling blocking, can overcome the problem of poor water circulation.

1、以上技术参数标准：循环水量M³/h入口水温37°C，出口水温32°C，外气湿球 (W.B.)*28°C为标准设计条件。

2、选择水泵之扬程是以配管冷凝器之阻力损失加上冷却塔之塔体扬程。

3、选配冷却塔时要根据当地湿球温度，对应制冷机组最大制冷量时的冷凝器水流量进行选型。

1、The above technical parameter: circulating water M / h fand entrance temperature of 37 °C, the outlet temperature of 32°C, air wet bulb (W.B) * 28 °C standard design conditions

2、The choice of pump head is on the resistance loss and cooling pipe of condenser tower head.

3、Selection of cooling tower according to local wet bulb temperature, corresponding chiller Maximum cooling capacity condenser water flow type selection.
